Fire Suppression Systems

Qtec Fire Services Pty Ltd is internationally recognized as the premiere supplier of high quality fire suppression equipment. We manufacture pre-engineered Foam Spray systems for mobile plant and equipment for the Mining, Construction, Transport, & Forestry industries.

We also import the full range of **DAFO** brand products for fire suppression systems.

This system is a compact design, with a stainless steel ring main. The system is purpose design and built for a foam application. The operating temperatures are -50°C to 99°C. With tank sizes from 5ltr to 25ltr in any combination up to 200ltrs.

The system is not charged with pressure until it is operated, making it a very safe system. It is discharged through a burst disk in the top of the cylinder and is always ready for activation. It is a great compact unit / design for those tight places and where space is a premium.

Fire Suppression Systems

The DAFO SV-K systems are Swedish design and made they have two basic types of systems, a bus system which is a full automatic system with battery back up, or a construction system which is fully automatic, manual activation, & have a alarm panel for monitoring.

Both these systems have the full range of tank sizes, come with up to 16 nozzles as standard which is almost double the number of nozzles from our competitors.
