Fire Suppression Systems

Qtec Fire Services has released a change to our LOP valve.

With market feed back and our constant need to improve our products, we have removed the “scotch lock” nipple set up and now use a torqued down nipple.

The valves are still manufactured to the highest quality, and with the nipple still removable, gives you the client the ability to repair and replace parts at a low cost to service rather than the usual attitude of replace the valve.

The nipple is a standard 1” or 25.4mm, torqued to 170Nm.

- For orders use same **Part Number QTB917**
