# Fire Suppression Systems

Qtec Fire Services has achieved Activfire Certification for Australian Standards AS5062-2016 for all its fire suppression systems;

VDAS LOP, & ROP systems, VDAS LOP induction, & ROP Induction systems, and for both foams Fireade 2000, and our new VDASF3 (Fluorine Free Foam).

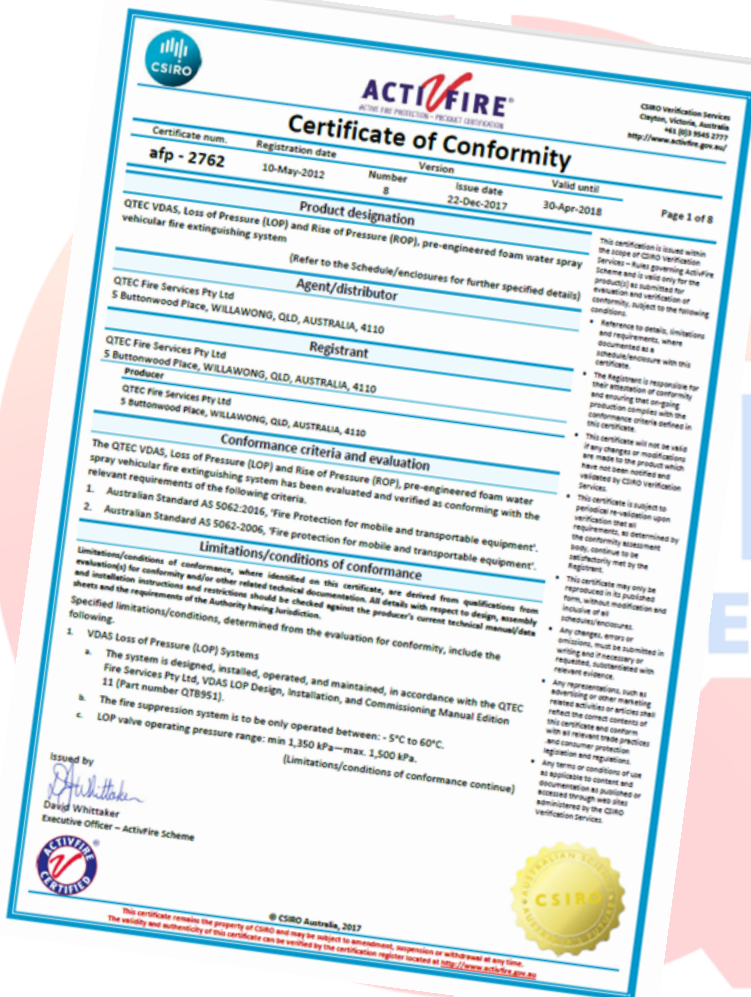

The advantage now is because we did not have to do any design changes to the systems, all older Qtec Fire VDAS systems become compliant to the new standard AS5062-2016. We are working hard all the time to bring new ideas and products to the market place and our Induction system is one of those ideas.

We are still running the pressure at 1350kPa which means we are now the industries lowest pressure for these systems. This also means less leak downs, which means more PRODUCTION time, and less COSTS.
